

Tips from the Martha's Vineyard Airport Water Department

-If you use a large amount of water that does not enter the sewer system you may want to consider installing a Sewer Abatement meter. Contact the Water Department for more information and for help ordering a secondary meter.

-While not using any water in your building, look at your water meter's small red dial and if you observe it moving there is likely a leak. The most common place for leaks are toilets.

-Having a hard time locating a suspected leak? You can schedule a water audit by calling 508-693-3783.

-Interested in saving energy? Call Cape Compact Light to schedule a free energy audit that may help with reducing energy costs including water conservation. Email efficiency@capelightcompact.org or call 1 (800) 797-6699

Contact the Water, Wastewater and Facilities Department at 508-693-3783 with any questions, concerns or to schedule a water audit.

5 Basic Ways To Conserve Water

Be Water-Wise

Everyone wants to help conserve valuable resources. And water is one of the most valuable there is. We couldn't live without it.

But what can an individual – or a single family – do to help? The answer is in these five simple suggestions. Follow them and you'll be water-wise, not wasteful.

1 Check every faucet in your home for leaks. Just a slow drip can waste 15 to 20 gallons a day. Fix it and you save almost 6,000 gallons a year.

2 Put a bit of food coloring in each toilet tank. Without flushing, watch for a few minutes to see if the color shows up in the bowl. It's not uncommon to lose up to 100 gallons a day from one of these otherwise invisible toilet leaks. And that's more than 30,000 gallons a year!

3 Don't shower too long or fill the tub too full. Five minutes of showering and about five inches in the tub is plenty.

4 Try to use automatic dish and clothes washing machines with full loads only. Even when the machines feature short cycles, you're being more efficient with your water when there are enough dirty things for a full load.

5 Most importantly, water your lawn and garden with good sense. Do it early or late, not in the midday heat. Avoid windy days. See that water goes where it should, not on sidewalks or driveways. Stick a spade in the ground now and then to see that water is getting down deep. A good soaking encourages good root systems. But remember this: A single lawn sprinkler spraying five gallons per minute use 50% more water in just one hour than a combination of ten toilet flushes, two 5-minute showers, two dishwasher loads and a full load of clothes. So be sensible. Check with local lawn/garden experts for best results, and check local watering regulations.

Just five suggestions. But they are the basic elements of a sound, reasonable, and effective water conservation program for you, your family, your friends – everyone. Don't let water go to waste. Do your part to use water wisely.
